

Description:

AIR-BUS indirect air flow heaters have a wide heat exchanger in stainless steel pipes and a separate Riello burner. They offer high efficiency and the possibility of connecting up to four flex tubes per unit. An indirect oil-fired heater is a portable or fixed unit that can generate a large volume of clean, fume-free warm air heating. To do this, these heating systems harness the power of combustible fuels, such as oil and bio fuel.

Unlike direct-fired space heaters, these types of systems isolate a flame, preventing it from directly combusting with the flow of air. By relying on a highly efficient heat exchanger to transfer this energy, warm exhaust air is free from unpleasant and unsafe pollutants like CO₂.

Complemented by a full range of accessories including digital thermostats, ducting kits and exhausts there is a package for most indirect heating requirements.

Product Code: BV471

Specification:

- Power Supply: 220 - 240v 50Hz
- Heating Power: 136kw (464,000 Btu)
- Energy Consumption: 1500w
- Air Volume: 8500m³/h
- Air Pressure: 250Pa
- Standard Air Outlet Diameter: 60cm
- Optional Air Outlet Diameter: 4 x 27cm
- Fuel Consumption: 12.93l/h
- Dimensions: 179 x 88 x 136 cm (LxWxH)
- Weight: 270kg
